

LoW GUIDANCE

What is a LoW code?

LoW stands for *List of Waste* and was preceded by the term EWC, or *European Waste Catalogue*. LoW codes are obtained from the list of waste, which is a list of examples of the most common types of waste. LoW codes are comprised of six digits, and for each code, there is a written description outlining how the waste is generated.

What are the codes used for?

The Government [Decree on Landfills](#) (331/2013) stipulates that basic characterization must be carried out on every batch of waste to be landfilled and identify the waste entry in accordance with the list of waste (LoW). Codes are also required for things like waste transfer documents and environmental reporting.

How do I choose the correct LoW code for waste?

If you know how and by what processes waste is generated, you can search the list for the entry group that best describes how the waste is generated, and then find the most suitable code within that group. LoW codes are therefore determined *in accordance with the process by which the waste is generated*. The list of codes can be found at the end of these guidelines.

If there are two different codes for waste, such as for contaminated soil, 17 05 03* and 17 05 04 (hazardous waste codes are marked with an asterisk*), the waste is classified based on any hazardous properties it may have, for example by comparing hazardous substance levels with set threshold values (please see [Classification of waste as hazardous waste – updated guide – Valto](#)).

Some wastes are always classified as hazardous waste, such as construction materials containing asbestos 17 06 05* (asbestos always has the hazardous property of HP7, carcinogenic) or as non-hazardous materials, such as 10 01 01 – bottom ash, slag and boiler dust. In such cases, the waste's total hazardous substance content has no impact on the LoW code. The waste's leachability properties have no impact on code selection, as they indicate the suitability of the waste for final disposal.

If waste is generated from industrial activity, the code may be found on the company's environmental permit.

If you're finding it difficult to choose the correct code, or if you aren't sure if the code you have chosen is correct, you can always ask Suomen Erityisjäte's personnel for assistance.

Information about the Waste Tax:

Some waste is subject to the Waste Tax. The Waste Tax aims to reduce the amount of waste that ends up in landfill and promotes the recycling and reuse. There is no need to pay the tax if the waste can be utilized in structures within the landfill site (e.g. concrete waste unsuitable for use outside of a landfill site).

2(24)

The rate of Waste Tax can be found on the Finnish Tax Administration's website (since 2023 the rate has been €80 per tonne). Hazardous waste is not subject to tax. Contaminated soil and stone is exempt from the tax.

The tax is paid by the operator of the landfill site. After reception, no separate invoice for waste tax is sent; instead, the price of the tax is factored into quotes provided by Suomen Erityisjäte Oy as necessary and on a case-specific basis by adding the tax to the price per tonne for waste reception for the types of waste subject to the waste tax and which cannot be used in landfill structures due to e.g. their construction-technical properties.

More information and a list of LoW codes for waste subject to the Waste Tax can be found on the Finnish Tax Administrations [website](#)
